Sustainable Procurement in Practice - Best Project 2012

Highly Commended Division C
North Sydney Council

North Sydney Council have commenced integrated policies in order to enhance standard procedures. A review was undertaken revealing inconsistent use of the previous green purchasing policy. A review of the council's procurement process presented the opportunity to incorporate the previous green purchasing policy into the standard document used by all Council staff. The integration was supported; resulting in a new Procurement Policy, ensuring sustainability is embedded within Council's management systems.

Winner Division C and Overall Winner
Tweed Shire Council

Tweed Shire Council developed a Supplier Environmental Performance Schedule. The process included a comprehensive review and update of Councils procurement protocol to include minimum standards for energy and water conservation, and development of the Environmental Performance Schedule. Some notable changes include in addition, any quotes greater than $50,000 require the supplier to complete an Environmental Performance Schedule.

Overall Winner Sustainable Procurement 2012

Highly Commended Division C
City of Canada Bay Council

The City of Canada Bay Council have undertaken a strategic approach in sustainable procurement through developing policies, procedures, working groups and tracking systems to monitor sustainable procurement which is integrated into a new software system upgrade to monitor actual spend. This interconnected approach has produced some big steps in energy and water conservation as well as waste reduction strategies that tie into sustainable procurement.

Winner Division C and Overall Winner
Lake Macquarie City Council

Lake Macquarie City Council strives to become a world leading local government organisation in achieving quadruple bottom line sustainability. Its strategic approach, to embed sustainable procurement within its processes, will entrench responsible business practices in both its actions and in the actions of
supply chains. Through this strategic approach, the Council has achieved a number of significant improvements to conserve energy and resources, of particular note are two key projects: 1. Solar cooling and heating review. 2. Pool technology review.
